

OMICRON turns to NextiraOne for new Voice over IP mobility system

Communications Expert installs converged fixed and mobile communications solution for engineering equipment test leader

Vienna – 6 February, 2008. NextiraOne, Europe's leading expert in communications solutions, has successfully designed and installed a new state-of-the-art network infrastructure at OMICRON's headquarter in Klaus, Vorarlberg, Austria. OMICRON is a chief provider of measurement testing equipment to the energy sector.

With mobility and standardisation of its existing telephony being a priority for OMICRON, NextiraOne Austria replaced its fixed-line telephone solution with a converged Voice over IP (VoIP) solution. The VoIP network is based on a wireless local area network (WLAN) as a platform for a new unified messaging system with Computer Telephony Integration (CTI), voicemail and advance call routing through Microsoft Outlook. Being linked to the Lightweight Directory Access Protocol (LDAP) customer database will enable OMICRON's employees to call customers and colleagues by simply clicking on their Outlook contact list while also enabling flexible working practices.

NextiraOne used a Nokia E-series solution to replace all other telephone devices and which automatically connects to the WLAN infrastructure within OMICRON's Austrian premises. Once the network infrastructure had been implemented, NextiraOne begun work on securing the network to ensure that all devices will be remote-locked and all data deleted in the event of theft.

"Working with the team of NextiraOne was excellent in many ways. We were convinced by the innovative concept, the tailored conversion and the comprehensive solution which meets all our demands. Our staff can now take advantage of optimised availability, synchronisation tools and there is only one extension for each employee, no matter where they are," said Wolfgang Senoner, Head of IT at OMICRON.

Margarete Schramböck, Managing Director of NextiraOne Austria, added: “Our team completed this extensive mobility project based on our thorough know-how in the integration of Voice over WLAN and linkage to databases. The success of the project confirms our spirit of innovation and our expert technicians’ skills in implementing unified solutions.”

Going forward, OMICRON will implement a VoIP telephone infrastructure across all locations globally.
